What is Ketorolac Tromethamine?

Ketorolac Tromethamine is a nonsteroidal anti-inflammatory drug (NSAID) used for the short-term management of moderate to severe pain. It works by inhibiting prostaglandin synthesis through non-selective COX-1 and COX-2 inhibition, providing potent analgesic, anti-inflammatory, and antipyretic effects.

Indications

- Short-term management (≤5 days) of moderate to severe acute pain .
- Postoperative pain (orthopedic, abdominal, dental, gynecological surgeries).
- Musculoskeletal pain
- Renal colic
- Migraine attacks
- Cancer-related pain (as an opioid-sparing agent)

Ketorolac Safer & Effective than Morphine

Ketorolac Tromethamine provides better pain relief than morphine for postoperative pain, with fewer side effects making it a safer and more effective option.¹

Dose

Indication	Route	Initial Dose	Maintenance Dose	Max Daily Dose	Duration
Postoperative Pain	IV/IM	30 mg/IM/IV	15-30 mg every 6 hours	120 mg/day (IM), 90 mg/day (IV)	≤5 days
Renal Colic	IM	30-60 mg IM	30 mg every 6-8 hours	120 mg/day	≤2-3 days
Musculoskeletal Pain	IM	30 mg	15-30 mg every 6 hours	120 mg/day	≤5 days
Migraine (off-label)	IM	30 mg IM	No repeat within 8 hours	60-90 mg/day	1-2 days
Oral Switch (From IV/IM)	Oral	30 mg every 4-6 hours	PRN, up to 4x daily	40 mg/day	After 2-3 days ^{2/3}
