Dexorent: The Ultimate Advantage

A new generation Proton Pump inhibitor for the treatment of gastric diseases. Dexorent has unique pharmacokinetic profile due to its delayed release and dual-delivery release system (DDR technology)

- Dual-release system with peak concentrations at distinct pH levels, 25% at pH 5.5 in proximal duodenum and 75% at pH 6.75 in distal small intestine, resulting in two peak concentrations
- Rapid peak levels within 1-2 hours and again within 4-5 hours.
- 24-hour protection with a single dose.

Mean plasma concentration comparison dexlansoprazole with esomeprazole

Mean plasma concentration-time curves of dexlansoprazole and esomeprazole after single oral doses of dexlansoprazole modified-release 60 mg (n = 43) and esomeprazole 40mg (n=44) delayed-release capsules in healthy subjects, linear scale.

Safety and Efficacy of Dexorent

- FDA-approved for pregnancy (category B) and for the treatment of heartburn with symptomatic non erosive GERD
- Enhanced safety when used with clopidogrel compared to other PPIs.
- Enhances sleep quality, productivity, and reduces nocturnal GERD symptoms.
- Easily tolerated regardless of meals.

Erosive Esophagitis: 60mg capsule daily for upto 8 weeks
Heart Burn: 30mg to 60mg capsule daily depends on the severity
SNE* GERD: 30mg capsule daily for upto 4 weeks
*symptomatic non erosive GERD

NOT RECOMMENDED
IN PATIENTS WITH SEVERE HEPATIC IMPAIRMENT
